

Juvederm Dermal Fillers treatment :

- Juvéderm® ULTRA is an advanced, cohesive, 3D hyaluronic acid matrix dermal filler with local anaesthetic
- Juvéderm® ULTRA contains non-animal hyaluronic acid with the addition of 0.3% lidocaine, local anaesthetic to provide more comfort both during and after injection. In the case of lip augmentation it may still be recommended to have a topical anaesthetic in order to ensure a pain free treatment as lips are a sensitive area.

How is it made?

- By bacterial fermentation from streptococci bacteria.

Is it temporary or permanent?

- Hyaluronic acid is completely broken down within the skin over a period of months, eventually leaving no trace of the filler.

Duration of effect

- Juvéderm® ULTRA has enhanced stability and resistance to degradation by heat and the body's metabolism, providing a duration of the product up to 12 months.
- Typically resolution is spontaneous, within one or two days after injection into the skin, and within a week after injection into the lips.

Side effects

The most common side effects include:

- tenderness, swelling, firmness, lumps/bumps,
- bruising, pain, redness, discoloration, and itching.
